

SEDM

Multi compartment smoke control damper

Technical Documentation

Installation, Commissioning, Operation, Maintenance and Service Manual

These technical specifications state a row of manufactured sizes, main dimensions, design and range of use of multi compartment smoke control dampers SEDM.

It is valid for production, design, ordering, delivery, storage, assembly, operation, maintenance and serviceability checks.

I. GENERAL

Description

Smoke control damper are designed into an inlet or extract smoke ventilation system. The dampers are designed either to close to provide compartmentation or to open (for fresh air inlet) or to allow removal of the heat and combustible products from a fire in the affected fire zone/compartment.

The damper blade is controlled by electrical actuating mechanism.

Dampers are fire resistant and are intended for systems with manual or automatic activation.

Dampers are designed for using in fire compartments that can be connected to the smoke exhaust ducts (tested according to EN 1366-8) or they can be installed in or on the construction of the fire compartment.

Dampers can be delivered with or without flange(s), with cover grille(s).

Damper SEDM

Damper characteristics

- CE certified acc. to EN 12101-8
- Tested in accordance with EN 1366-10
- Classified acc. to EN 13501-4
- External Casing leakage class ATC 3 (old marking "C"), Internal leakage min. class 2 acc. to EN 1751
- Cycling test in class C_{mod} acc. to EN 12101-8
- Certificate of constancy of performance No. 1391-CPR-XXXX/XXXX
- Declaration of Performance No. PM/SEDM/01/XX/X
- Hygienic assessment - Report No. 1.6/pos/19/19c

Classification of Dampers		
Supporting construction	Installation type	Classification
Horizontal or vertical smoke extraction ducts tested according to EN 1366-8 or EN 1366-9 <ul style="list-style-type: none"> ● into/onto the duct 	Damper installed into/onto a duct with/without grille	EI120 (h _{od}) S1500[H]C _{mod} HOT400/30MAmulti EI120 (V _{ed}) S1500[V/H]C _{mod} HOT400/30MAmulti
Standard low- and high-density rigid wall construction according to EN 1363-1 <ul style="list-style-type: none"> ● damper in the wall ● 100 mm min. wall thickness 	Mortar or gypsum	EI 120 (V _{ew}) S1500[V/H]C _{mod} HOT 400/30MAmulti
	Ablative Coated Batt	
	Mineral wool and boards	
Standard flexible wall construction, min. EI90. according to EN 1363-1 <ul style="list-style-type: none"> ● damper in the wall ● 100 mm min. wall thickness 	Mortar or gypsum	EI 120 (V _{ew}) S1500[V/H]C _{mod} HOT 400/30MAmulti
	Ablative Coated Batt	
	Mineral wool and boards	
Standard low- and high-density rigid floor construction according to EN 1366-2 <ul style="list-style-type: none"> ● damper in the floor ● 150 mm min. floor thickness 	Mortar or gypsum	EI 120 (h _{ow}) S1500[H]C _{mod} HOT 400/30MAmulti
	Ablative Coated Batt	
	Mineral wool and boards	

Working conditions

- Exact damper function is provided under the following conditions
 - maximum air velocity 15 m/s
 - underpressure max. -1500 Pa or overpressure max. 500 Pa
- Dampers are designed for installation in vertical or horizontal openings of fire separating constructions.
- The damper may be in any position between the position open and closed (those positions included) at the beginning of the risk of fire. Command to close the damper shall be started within 30 seconds from the beginning of the risk of fire; command to open the damper shall be started within 25 minutes from the beginning of the risk of fire.
- Dampers are designed for macroclimatic areas with mild climate according to EN IEC 60 721-3-3 ed.2., class 3K22. (Environment 3K22 is typically protected place with regulated temperature)
- Temperature in the place of installation is permitted to range from -30°C to +50°C.

II. DESIGN

Design with actuating mechanism

Design .44 and .54

- Belimo actuators are used for dampers, series BEN, BEE, BE for 230V AC resp. 24 V AC/DC, Schischek InMax 50.75-S actuators (universal 24V or 230V supply) are used for large size of dampers.
- After connection to the power supply voltage, the actuator moves the damper blade to the "OPEN" position or "CLOSED" (according to the corresponding connection, see wiring diagram). If the power supply is interrupted, the actuator stops at the current position. The signalling of the "OPEN" and "CLOSED" damper blade positions is ensured by two built-in fixed "potential-free" end- limit switches.
- The actuator for operating the damper blade is mounted in an insulated cover/box. It is accessible after removing the cover lid. The electrical connection of the actuator is made with a non-flammable cable (or a cable located in the adjoining cable duct), which passes through an opening made in the wall of the insulated cover/box when installing the damper or when connecting the actuator power cable. Cable penetrations must meet a minimum fire resistance of 30 minutes.

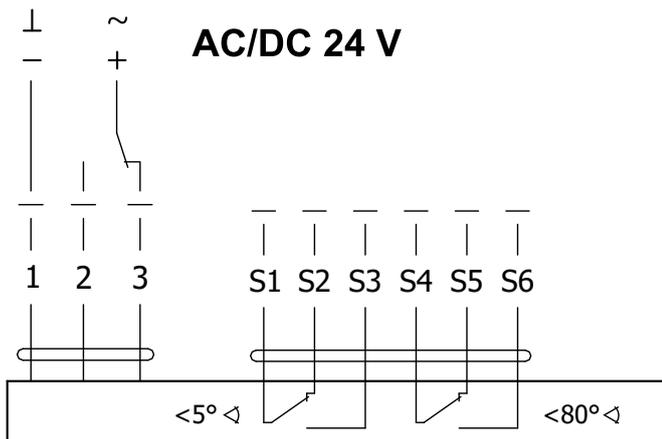

Design .65

- Belimo modulating actuators, BEN (BEE)-SR series for 24V AC/DC are specially designed for remote control of smoke control dampers. The position of the damper blade is adjustable by means of control voltage 0 (2)...10V DC.
- The signalling of the "OPEN" and "CLOSED" damper blade positions is ensured by two built-in fixed "potential-free" limit switches.
- The actuator for operating the damper blade is mounted in an insulated cover/box. It is accessible after removing the cover lid. The electrical connection of the actuator is made with non-flammable cables (or cables located in the adjoining cable duct), which pass through an opening made in the wall of the insulated cover when installing the damper or when connecting the power cables of the actuator. Cable penetrations must meet a minimum fire resistance of 30 minutes.

240V/0,25A switching at 5° and 85°.

Actuator SCHISCHEK InMax 50.75-S

Actuator SCHISCHEK	InMax 50.75-S
Power voltage	24-240 VAC/DC 50/60Hz
Power consumption - in operation - heating	10 W 16 W (start at -20°C)
Protection class	I
Degree of protection	IP 66
Adjustment time for 95°	< 60 s
Ambient temperature	-40°C ... +50°C
Storage temperature	-40°C ... +70°C
Connection	cable 1 m, 0,5 mm ²

III. DIMENSIONS

SEDM without flange

SEDM with flange

■ External dimensions of flange A(B) + 60 is not same as external dimensions of damper

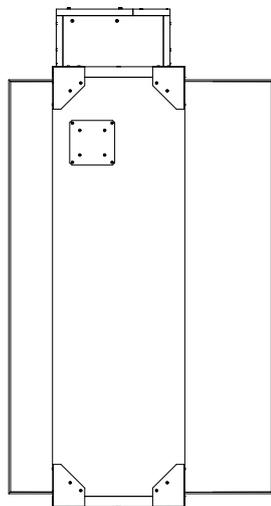

- 1 SEDM
- 2 Actuating mechanism
- 3 Damper blade
- 4 Inspection opening cover
- 5 Flange**

* Dimensions with actuating mechanism InMax 50.75S.
 ** If it is necessary, arbitrary flange could be removed.

Damper blade overlaps

- For damper without flanges the open damper blade overlaps the damper body from dimension B = 250 by the value "c" or "a" and "c". These values are specified in chapter Technical parameters → see pages 11 to 22.
- For damper with flanges the open damper blade overlaps the damper body from dimension B = 355 by the value "f" or "e" and "f". These values are specified in chapter Technical parameters → see pages 11 to 22.

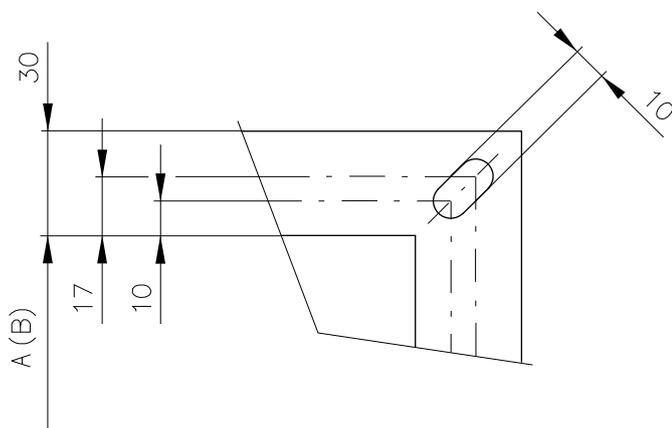

Values "a" and "c" - without flange

Values "e" and "f" - with flange

Hodnoty "a", "c", "e" a "f" je nutné respektovat při projekci navazujícího vzduchotechnického potrubí.

Flange of a damper

30 mm wide flanges are fitted with oval holes in the corners

IV. INSTALLATION

Placement and installation

- Dampers are designed to remove heat and combustion products (e.g. smoke) from fire compartments
- Dampers are suitable for installation in vertical and horizontal position passages of fire separating constructions. The damper installation procedures must be done so that all load transfer from the fire separating constructions to the damper is absolutely excluded.
- Following air-conditioning duct must be suspended or supported so that all load transfer from the following duct to the damper flange is absolutely excluded.
- The gap between the installed damper and the fire separating construction must be perfectly filled with approved material.
- After installing the damper, the damper blades must only be opened, or closed by operation of the actuator only.
- The distance between the damper and the construction (wall, ceiling) must be 75 mm at the minimum, according to EN 1366-2. If two or more dampers are to be installed in one fire separating construction, the distance between adjacent dampers must be 200 mm at the minimum, according to EN 1366-10.
- To provide the necessary space for access to the control device, it is recommended that other objects be at least 350 mm away from the control parts of the damper.

Minimum distance between the dampers and the construction

- minimum distance 200 mm between dampers, according to EN 1366-10
- minimum distance 75 mm between damper and construction (wall/ceiling), according to EN 1366-10

Dimensions of an installation opening

Mortar or gypsum

- X = min. 50 mm
- X = max. 150 mm

Mineral wool and boards

- X = min. 30 mm
- X = max. 75 mm

Ablative Coated Batt

- X = min. 30 mm
- X = max. 230 mm

Statement of installations

Fire separating construction, location of the damper	Installation type, installation system	Gap width [mm]	Classification	Page

* Including assembly of dampers – side by side → see pages 26 to 28

In solid wall construction

In solid wall construction - mortar or gypsum

EI 120 (v_{ew}) S1500[V/H]C_{mod}HOT 400/30MAmulti

- Standard low- and high-density rigid wall construction according to EN 1363-1
- For connection of following duct → see page 47
- Examples of anchors to the fire dividing construction → see pages 41 to 46
- Damper must be properly supported until the gypsum has fully hardened.

W = min. 50 mm
W = max. 150 mm

- 1 SEDM
- 2 Solid wall construction
- 3 Mortar or gypsum
- 4 Profile with threaded rod → see pages 41 to 42
- 5 Actuator cover - must be removable after installation of the damper
- 6 Flange

In solid wall construction - 2 dampers side by side - mortar or gypsum

EI 120 (v_{ew}) S1500[V/H]C_{mod}HOT 400/30MAmulti

- Standard low- and high-density rigid wall construction according to EN 1363-1
- For connection of following duct → see page 47
- Examples of anchors to the fire dividing construction → see pages 41 to 46
- Damper must be properly supported until the gypsum has fully hardened.
- Spacer straps and screw connections, are not included in the delivery!

W = min. 50 mm
W = max. 150 mm

Composition of spacer strips

- 1 SEDM
 - 2 Solid wall construction
 - 3 Mortar or gypsum
 - 4 Spacing strip (e.g. Promatect-H, th. 10 mm, strips at the edge is 50 mm wide, strip in the middle (in the place of the construction) is 100 mm wide) - glue with HILTI CFS-S ACR (position 5) to the damper body
 - 5 Fire-resistant mastic - (HILTI CFS-S ACR...)
 - 6 M8 bolt assembly (bolt M8x105 mm, 2 pcs washer, nut M8)*
 - 7 Profile with threaded rod → see pages 41 to 42
 - 8 Actuator cover - must be removable after installation of the damper
- * **RESPECT JOINT POSITION !**
Bolts and nuts shall not prevent free rotation on the blades.

In solid wall construction - 2 on top of each other - mortar or gypsum

EI 120 (v_{ew}) S1500[V/H]C_{mod}HOT 400/30MAmulti

- Standard low- and high-density rigid wall construction according to EN 1363-1
- For connection of following duct → see page 47
- Examples of anchors to the fire dividing construction → see pages 41 to 46
- Damper must be properly supported until the gypsum has fully hardened.
- Spacer straps and screw connections, are not included in the delivery!

Composition of spacer strips

W = min. 50 mm
W = max. 150 mm

- 1 SEDM
- 2 Solid wall construction
- 3 Mortar or gypsum
- 4 Spacing strip (e.g. Promactect-H, th. 10 mm, strips at the edge is 50 mm wide, strip in the middle (in the place of the construction) is 100 mm wide) - glue with HILTI CFS-S ACR (position 5) to the damper body
- 5 Fire-resistant mastic - (HILTI CFS-S ACR...)
- 6 M8 bolt assembly (bolt M8x105 mm, 2 pcs washer, nut M8)
- 7 Profile with threaded rod → see pages 41 to 42
- 8 Actuator cover - must be removable after installation of the damper

In solid wall construction - 4 dampers - mortar or gypsum

EI 120 (v_{ew}) S1500[V/H]C_{mod}HOT 400/30MAmulti

- Standard low- and high-density rigid wall construction according to EN 1363-1
- For connection of following duct → see page 47
- Examples of anchors to the fire dividing construction → see pages 41 to 46
- Damper must be properly supported until the gypsum has fully hardened.
- Spacer straps and screw connections, are not included in the delivery!

W = min. 50 mm
W = max. 150 mm

*** RESPECT JOINT POSITION !**
Bolts and nuts shall not prevent free rotation on the blades.

- 1 SEDM
- 2 Solid wall construction
- 3 Mortar or gypsum
- 4 Spacing strip (e.g. Promactect-H, th. 10 mm, strips at the edge is 50 mm wide, strip in the middle (in the place of the construction) is 100 mm wide) - glue with HILTI CFS-S ACR (position 5) to the damper body
- 5 Fire-resistant mastic - (HILTI CFS-S ACR...)
- 6 M8 bolt assembly (bolt M8x105 mm, 2 pcs washer, nut M8)*
- 7 M8 bolt assembly (bolt M8x105 mm, 2 pcs washer, nut M8), span max .400 mm
- 8 Profile with threaded rod → see pages 41 to 42
- 9 Actuator cover - must be removable after installation of the damper

In solid wall construction - Ablative Coated Batt

EI 120 (v_{ew}) S1500[V/H]C_{mod}HOT 400/30MAmulti

- Standard low- and high-density rigid wall construction according to EN 1363-1
- For connection of following duct → see page 47
- Examples of anchors to the fire dividing construction → see pages 41 to 46

W = min. 30 mm
W = max. 230 mm

- 1 SEDM
- 2 Solid wall construction
- 3 Profile with threaded rod → see pages 41 to 42
- 4 Actuator cover - must be removable after installation of the damper
- 5 Flange

Ablative Coated Batt System HILTI*

- 6 Mineral wool board - min. density 140 kg/m³ (HILTI CFS-CT B 1S 140/50...)
- 7 Fire stop coating - th. 1 mm (HILTI CFS-CT...) - coating is overcoated on the support construction and on the damper casing/duct.
- 8 Fire-resistant mastic - (HILTI CFS-S ACR...) fill the gap from both sides of the fire separation construction and around the perimeter of penetration and damper casing.

* HILTI system can be replaced by a similar system with the same or higher thickness, density, fire reaction class, tested according to EN 1366-3.

In solid wall construction - mineral wool and boards

EI 120 (v_{ew}) S1500[V/H]C_{mod}HOT 400/30MAmulti

- Standard low- and high-density rigid wall construction according to EN 1363-1
- For connection of following duct → see page 47
- Examples of anchors to the fire dividing construction → see pages 41 to 46

W = min. 30 mm
W = max. 75 mm

- 1 SEDM
- 2 Solid wall construction
- 3 Mineral wool board - min. density 140 kg/m³ (e.g. PROMAPYR-T150, ROCKWOOL HARDROCK / STEPROCK HD)
- 4 Fire-resistant board - min. th. 15 mm, min. density 870 kg/m³ (e.g. PROMATECT-H). Secure with screws min. 5x50 mm. The screws must be fixed in the construction (screw span ≤ 250 mm), if necessary use steel anchors.
- 5 Glue/Fire-resistant mastic (e.g. Promat K84 or equivalent) - glue Fire-resistant board to the construction and to the damper body and seal around the perimeter of the contact with the construction and damper
- 6 Profile with threaded rod → see pages 41 to 42
- 7 Actuator cover - must be removable after installation of the damper
- 8 Flange

In gypsum wall construction

In gypsum wall construction min. EI 90 - mortar or gypsum

- Standard flexible wall construction, min. EI90. according to EN 1363-1.
- For connection of following duct → see page 47
- Examples of anchors to the fire dividing construction → see pages 41 to 46
- Damper must be properly supported until the gypsum has fully hardened.
- The installation opening is lined with a UW/CW profile.

EI 120 (v_{ew}) S1500[V/H]C_{mod}HOT 400/30MAmulti

W = min. 50 mm
W = max. 150 mm

- 1 SEDM
- 2 Gypsum wall construction
- 3 Mortar or gypsum
- 4 Profile with threaded rod → see pages 41 to 42
- 5 Actuator cover - must be removable after installation of the damper
- 6 Flange

In gypsum wall construction min. EI 90 - Ablative Coated Batt

EI 120 (v_{ew}) S1500[V/H]C_{mod}HOT 400/30MAmulti

- Standard flexible wall construction, min. EI90. according to EN 1363-1.
- For connection of following duct → see page 47
- Examples of anchors to the fire dividing construction → see pages 41 to 46
- The installation opening is lined with a UW/CW profile.

W = min. 30 mm
W = max. 230 mm

- 1 SEDM
- 2 Gypsum wall construction
- 3 Profile with threaded rod → see pages 41 to 42
- 4 Actuator cover - must be removable after installation of the damper
- 5 Flange

Ablative Coated Batt System HILTI*

- 6 Mineral wool board - min. density 140 kg/m³ (HILTI CFS-CT B 1S 140/50...)
- 7 Fire stop coating - th. 1 mm (HILTI CFS-CT...) - coating is overcoated on the support construction and on the damper casing/duct.
- 8 Fire-resistant mastic - (HILTI CFS-S ACR...) fill the gap from both sides of the fire separation construction and around the perimeter of penetration and damper casing.

* HILTI system can be replaced by a similar system with the same or higher thickness, density, fire reaction class, tested according to EN 1366-3.

In gypsum wall construction min. EI 90 - mineral wool and boards

EI 120 (v_{ew}) S1500[V/H]C_{mod}HOT 400/30MAmulti

- Standard flexible wall construction, min. EI90. according to EN 1363-1.
- For connection of following duct → see page 47
- Examples of anchors to the fire dividing construction → see pages 41 to 46
- The installation opening is lined with a UW/CW profile.

W = min. 30 mm
W = max. 75 mm

- 1 SEDM
- 2 Gypsum wall construction
- 3 Mineral wool board - min. density 140 kg/m³ (e.g. PROMAPYR-T150, ROCKWOOL HARDROCK / STEPROCK HD)
- 4 Fire-resistant board - min. th. 15 mm, min. density 870 kg/m³ (e.g. PROMATECT-H). Secure with screws min. 5x50 mm. The screws must be fixed in the construction (screw span ≤ 250 mm), if necessary use steel anchors.
- 5 Glue/Fire-resistant mastic (e.g. Promat K84 or equivalent) - glue Fire-resistant board to the construction and to the damper body and seal around the perimeter of the contact with the construction and damper
- 6 Profile with threaded rod → see pages 41 to 42
- 7 Actuator cover - must be removable after installation of the damper
- 8 Flange

In solid ceiling construction

In solid ceiling construction - mortar or gypsum

EI 120 (h_{ow}) S1500[H]C_{mod}HOT 400/30MAmulti

- Standard low- and high-density rigid floor construction according to EN 1366-2
- For connection of following duct → see page 47
- Examples of anchors to the fire dividing construction → see pages 41 to 46
- Number of L-holders and their placement, acc. to AxB dimension → see page 43
- Damper must be properly supported until the gypsum has fully hardened.
- The damper can be installed from both sides of the construction, i.e. From the top or the bottom side of the ceiling

W = min. 50 mm
W = max. 150 mm

- 1 SEDM
- 2 Solid ceiling construction
- 3 Mortar or gypsum
- 4 Profile with threaded rod → see pages 41 to 42
- 5 L-holder → see page 43
- 6 Actuator cover - must be removable after installation of the damper
- 7 Flange

In solid ceiling construction - Ablative Coated Batt

EI 120 (h_{ow}) S1500[H]C_{mod}HOT 400/30MAmulti

- Standard low- and high-density rigid floor construction according to EN 1366-2
- For connection of following duct → see page 47
- Examples of anchors to the fire dividing construction → see pages 41 to 46
- Number of L-holders and their placement, acc. to AxB dimension → see page 43

Installation damper into/onto smoke extraction ducts

Installation of the damper into/onto horizontal or vertical steel smoke extraction duct insulated with mineral wool

EI120 (h_{od}) S1500[H]C_{mod}HOT400/30MAmulti
EI120 (v_{ed}) S1500[V/H]C_{mod}HOT400/30MAmulti

- The dampers may be installed onto or into smoke extraction ducts listed below:
 - **Flameshield Fireduct (manufacturer Kent Ductwork Ltd.)**
The duct is made of 1.2 mm thick galvanized steel sheet and insulated with 1 layer of 90 mm thick stone wool Rockwool FirePro DuctRock Slab (manufacturer ROCKWOOL Ltd.). The stone wool is finished with a black aluminium foil on the outer side.
- The dampers may be installed onto or into other smoke extraction ducts than that specified above with the following limitations:
 - The duct shall be tested according to EN 1366-9 or EN 1366-8 depending on the intended use.
 - The duct shall be made of material of the same or greater density and of the same or greater thickness as the ducts listed above.
 - Changing surface protection materials is not permitted.
 - Changing the paint surface finish is not permitted.
- Support, drop rods, anchors etc. must be used in accordance with a duct manufacturer instructions.
- The connected duct shall be suspended in such a way that the transfer of all loads from the duct to the damper is completely excluded.
- The damper may be installed in position according picture below.

- 1 SEDM
- 2 SEDM flange
- 3 Steel smoke extraction duct (type according to duct manufacturer instructions)
- 4 Surface protection material (type according to duct manufacturer instructions)
- 5 Steel insulation pin (type according to duct manufacturer instructions)
- 6 Suspension system (type according to duct manufacturer instructions)

(continued on next page)

continuation of installation damper into/onto horizontal or vertical steel smoke extraction duct insulated with mineral wool

- The damper is connected to the smoke extraction duct by the damper flange as follow:
 - M10 bolts, washers and nuts are used at the corners of the flange
 - C-clamps with M8 bolts with a maximum spacing of 200 mm are used around the circumference
 - Ceramic selfadhesive sealing tape is inserted between flanges
- The duct insulation is stretched at least 150 mm on the damper body and attached to the damper with Screws with diameter 5 mm and a washer M5 (DIN 125A) with a maximum spacing 200 mm.

| <ul style="list-style-type: none"> 1 SEDM 2 SEDM flange 3 Steel smoke extraction duct (type according to duct manufacturer instructions) 4 Surface protection material (type according to duct manufacturer instructions) 5 Steel insulation pin (type according to duct manufacturer instructions) 6 Suspension system (type according to duct manufacturer instructions) | <ul style="list-style-type: none"> 7 Flange connection at corners - M10 bolt, washers and nut 8 M8 C-clamps - maximum spacing of C-clamps 200 mm (type according to duct manufacturer instructions) 9 Ceramic selfadhesive sealing tape - around the duct circumference (type according to duct manufacturer instructions) 10 Insulation connection to the damper body - washer M5 (DIN 125A), screw 5xL mm (screw length = insulation thickness + 20 mm) |
|--|---|

Installation of the damper into/onto horizontal or vertical smoke extraction duct made of calcium silicate boards

EI120 (h_{od}) S1500[H]C_{mod}HOT400/30MAmulti
EI120 (v_{ed}) S1500[V/H]C_{mod}HOT400/30MAmulti

- The dampers may be installed onto or into smoke extraction ducts listed below:
 - **Smoke extraction duct Promatect-L500 (manufacturer Promat)**
Smoke extraction self-supporting duct made of Promatect-L500 of thickness 40 mm and density 500 kg/m³.
- The dampers may be installed onto or into other smoke extraction ducts than that specified above with the following limitations:
 - The duct shall be tested according to EN 1366-9 or EN 1366-8 depending on the intended use.
 - The duct shall be made of material of the same or greater density and of the same or greater thickness as the ducts listed above.
- Support, drop rods, anchors etc. must be used in accordance with a duct manufacturer instructions.
- The connected duct shall be suspended in such a way that the transfer of all loads from the duct to the damper is completely excluded.
- The damper may be installed in position according picture below.

- 1 SEDM
- 2 Smoke extraction duct made of calcium silicate boards (e.g. PROMATECT-L500, th. 40 mm)
- 3 Connecting strip (e.g. PROMATECT-H, th. 10 mm, width 100 mm) - screwed across the gap between the damper body and the adjacent duct using 5×50 mm screws at a spacing of max. 200 mm. Joints between the damper, duct segment and connecting strip sealed with adhesive (e.g. PROMAT K84).
- 4 Suspension system (type according to duct manufacturer instructions)

(continued on next page)

continuation of installation damper into/onto horizontal or vertical smoke extraction duct made of calcium silicate boards

- The damper is connected to the smoke extraction duct made of calcium silicate boards (e.g. PROMATECT-L500, th. 40 mm) as follow:
 - Using a connecting strip (e.g. PROMATECT-H, th. 10 mm, width 100 mm) - screwed across the gap between the damper body and the adjacent duct using 5x50 mm screws at a spacing of max. 200 mm. Joints between the damper, duct segment and connecting strip sealed with adhesive (e.g. PROMAT K84).

- 1 SEDM
- 2 Smoke extraction duct made of calcium silicate boards (e.g. PROMATECT-L500, th. 40 mm)
- 3 Connecting strip (e.g. PROMATECT-H, th. 10 mm, width 100 mm) - screwed across the gap between the damper body and the adjacent duct using 5x50 mm screws at a spacing of max. 200 mm. Joints between the damper, duct segment and connecting strip sealed with adhesive (e.g. PROMAT K84).
- 4 Suspension system (type according to duct manufacturer instructions)

V. SUSPENSION SYSTEMS

Mounting to the ceiling wall

- The dampers must be suspended using threaded rods and mounting profiles. Their dimensioning depend on the weight of the damper.
- The dampers and the duct must be suspended separately.
- Following air-conditioning duct must be suspended or supported so that all load transfer from the following duct to the damper flanges is absolutely excluded. Adjacent duct must be suspended or supported, as required by the duct suppliers.
- Threaded rods longer than 1,5 m must be protected by fire insulation.

Examples of anchoring to the ceiling construction Follow the instructions of fixing specialist or installation company

Hinge plates

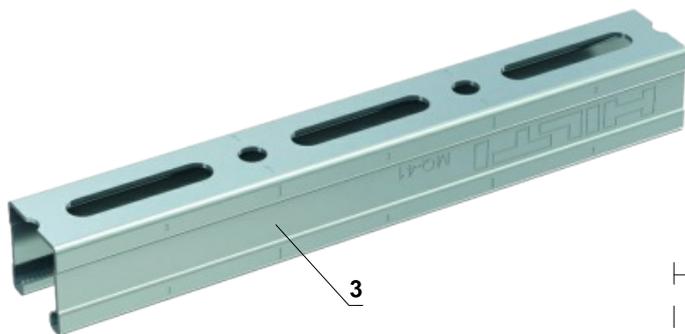

- If in doubt, always consult an anchor specialist engineer such as Halfen or Hilti.

Load capacities of threaded rods at the required fire resistance 60 min. $t \le 120 \text{ min.}$

Size	As [mm ²]	Weight [kg]	
		for 1 rod	for 2 rods
M8	36,6	22	44
M10	58	35	70
M12	84,3	52	104
M16	157	96	192
M18	192	117	234
M20	245	150	300

- 1 Threaded rod M8 - M20
- 2 Nut M8 - M20
- 3 Washer for M8 - M20
- 4 Coupling Nut M8 - M20
- 5 Anchor
- 6 Hinge plate - min. thickness 10 mm
- 7 Concrete screw tested for fire resistance R30-R90, max. Tension up to 0.75 KN (length 35 mm)

Example of placing of mounting profiles HILTI

- 1 SEDM
- 2 Threaded rod M8 - M12
- 3 Support HILTI MQ-41 or MQ-41/3
- 4 Bored plate HILTI MQZ-L
- 5 Washer for M8 - M12
- 6 Nut M8 - M12
- 7 Flange of SEDM
- 8 Flange of duct
- 9 Self-tapping screw 5x30 mm and 1 pcs large washer M5 (for additional fixing, prevents the damper from sliding off the support - not necessary use)

Fixing SEDM according to size, with L-holder - fixing on wall / ceiling

FOR: $A < 500$
 $B < 500$

FOR: $A < 500$
 $B \geq 500$

FOR: $A \geq 500$
 $B \geq 500$

- * From inner edge of the damper to the center of the holder, on both sides / opposite sides (mirrored)
- ** 1 holder to CENTER damper part "A" and on opposite sides (mirrored)
- *** In case of $A \geq 1000$, add holders to the center of the "A" side.

L-holder for connecting damper on the wall / ceiling (optional accessories MANDIK, a.s.)

- 1 SEDM
- 2 L-holder - optional accessories from MANDIK, a.s.
- 3 Holes for screw UNI min. 5x30 mm for fastening L-holder to damper body
- 4 M8 bolt assembly (bolt min. M8x60 mm, 2 pcs large washer, nut M8) or Anchor to concrete, → see page 41

Fixing SEDM according to size - fixing to solid / gypsum or ceiling construction

- * From inner edge of the damper to the center of the holder, on both sides / opposite sides (mirrored)
- ** 1 holder to CENTER damper part "A" and on opposite sides (mirrored)
- *** In case of A ≥ 1000, add holders to the center of the "A" side.

Installation holder for connecting damper to the construction (optional accessories MANDIK, a.s.)

- 1 SEDM
- 2 Installation holder for connecting damper to the wall (optional accessories MANDIK, a.s. or sheet metal min. thickness 2 mm and min. width 60 mm)
- 3 Anchor to concrete min. M6 or Screw UNI 6x60 mm to Gypsum grid from "C" profile
- 4 Installation holes
- 5 M8 bolt assembly (bolt M8x55 mm, 2 pcs large washer M8, nut M8)

■ Details of fixing the holder to the construction → see pages 45 to 46

Fixing SEDM to the solid (ceiling) wall construction with Ablative Coated Batt

*** RESPECT JOINT POSITION !**

Bolts and nuts shall not prevent free rotation on the blades.

- 1 Solid wall construction
- 2 SEDM
- 3 Ablative Coated Batt
- 4 Installation holder for connecting damper to the wall (optional accessories MANDIK, a.s. or sheet metal min. thickness 2 mm and min. width 60 mm). Full drawing of bracket, → see page 44
- 5 Anchor to concrete min. M6
- 6 Installation holes
- 7 M8 bolt assembly (bolt M8x55 mm, 2 pcs large washer M8, nut M8) *

■ The method of mounting must meet the minimum requirements for attachment in accordance with national regulations.

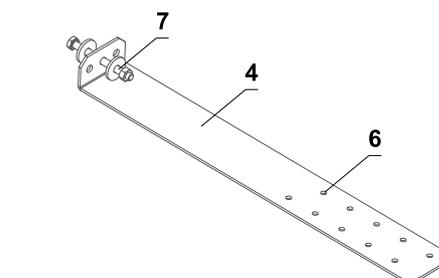

Fixing SEDM to the gypsum wall construction with Ablative Coated Batt

* RESPECT JOINT POSITION !

Bolts and nuts shall not prevent free rotation on the blades.

- 1 Gypsum wall construction
- 2 SEDM
- 3 Ablative Coated Batt
- 4 Installation holder for connecting damper to the wall (optional accessories MANDIK, a.s. or sheet metal min. thickness 2 mm and min. width 60 mm). Full drawing of bracket, → see page 44
- 5 Screw UNI 6x60 mm
- 6 Installation holes
- 7 M8 bolt assembly (bolt M8x55 mm, 2 pcs large washer M8, nut M8) *
- 8 Gypsum grid from "C" profile

■ The method of mounting must meet the minimum requirements for attachment in accordance with national regulations.

Example of duct connection

Connection to smoke extract duct acc. to EN 1366-8 (MULTI) / to EN 1366-9 (SINGLE)

A-A

B-B

Electrically conductive connection

- 1 SEDM
- 2 Smoke extraction duct - tested according to EN 1366-8 or EN 1366-9
- 3 Flange of SEDM
- 4 Flange of duct
- 5 M8 bolt assembly (bolt M8x20 mm, 2 pcs large washer M8, nut M8) *
- 6 Ceramic self-adhesive tape (FJ 120 Pyrosil B 170-250 kg/m³ - Tremco-illbruck) or equivalent
- 7 Lock washers M8

* min. one connection must be electrically conductive

VI. ACCESSORIES

Cover grille KMM

- The grilles type KMM (TPM 002/96) can be used to close smoke control dampers.
- For the installation of the grille, the overlap of the damper blade has to be respected → see pages 11 to 22. In case of blade overlap, the damper must be equipped with an extension piece ("duct").
- Free area value for KMM is 78%.
- These grilles are available in all sizes of the SEDM

SEDM with cover grille without flange

SEDM with cover grille and with flange

VII. TECHNICAL DATA

Pressure loss

Pressure loss calculation

$$\Delta p = \xi \cdot \rho \cdot \frac{w^2}{2}$$

Δp	[Pa]	pressure loss
w	[m/s]	air flow speed in nominal damper section
ρ	[kg/m ³]	air density
ξ	[-]	coefficient of local pressure loss for the nominal damper section → see page 50

Determination of pressure loss by using diagram $\rho = 1,2 \text{ kg/m}^3$

Coefficient of local pressure loss

VIII. MATERIAL, FINISHING

- Damper casings and blades are made of fire resistant asbestos free boards made of mineral fibres.
- Fasteners are galvanized.
- Damper bodies and blades can be coated with Promat 2000 anti-moisture coating or Promat-SR anti-aggressive coating. Fasteners are galvanized.

IX. TRANSPORTATION, STORAGE AND WARRANTY

Logistic terms

- Dampers are delivered on pallets. As standard, the dampers are wrapped in plastic foil for protection during transport and must not be used for long-term storage of the equipment. Changes in temperature during transport may cause condensation of water vapour inside the packaging and thereby conditions may arise inside the packaging that are suitable for corrosion of materials used in the equipment (e.g. white corrosion on zinc-coated items or mould on calcium silicate). Therefore, it is necessary to remove the transport packaging immediately after unloading to allow air to circulate around the product.
- The equipment must be stored in a clean, dry, well ventilated and dust-free environment out of direct sunlight. To ensure protection against moisture and extremes of temperatures (minimum temperature +5°C) the equipment must be protected against mechanical and accidental damage prior to installation.
- Another required packaging system should be approved and agreed by the manufacturer. Packaging material is not returnable in case that another packaging system (material) is required and used and it is not included in the final price of the damper.
- Appropriate handling equipment (e.g. forklifts) must be used for unloading and further handling of the damper due to its weight. Dampers are fragile.
- Dampers are transported by box freight vehicles without direct weather impact, there must not occur any shocks and ambient temperature must not exceed +50°C. Dampers must be protected against impact when transported and manipulated. During transportation, the damper blades must be in the "CLOSED" position.
- Dampers are stored indoors in an environment without any aggressive vapours, gases or dust. Indoor temperature must be in the range from -30°C to +50°C and maximum relative humidity 95% (avoid condensation on the damper body). Dampers must be protected against impact when transported and manipulated.

Warranty

- The manufacturer provides a warranty of 24 months from the date of dispatch for the dampers.
- If a Schischek actuator is used, the actuator is warranted by the manufacturer for 12 months.
- The warranty for fire dampers SEDM, provided by the manufacturer, is completely void if actuating, closing and control devices are unprofessionally handled by untrained workers or if electric components, i.e. actuators.
- The warranty is void if dampers are used for other purposes, devices and working conditions than those allowed by these technical conditions or if the dampers are mechanically damaged during handling.
- If the dampers are damaged by transport, a record must be written down with the forwarder at reception for later complaint.

X. ASSEMBLY, ATTENDANCE AND MAINTENANCE

- Assembly, maintenance and damper function check can be done only by qualified and trained person, i.e. "AUTHORIZED PERSON" according to the manufacturer documentation. All works done on the smoke control dampers must be done according international and local norms and laws.
- All effective safety standards and directives must be observed during damper assembly.
- To ensure reliable smoke exhaust damper function it is necessary to avoid blocking the closing mechanism and contact surfaces with collected dust, fibre and sticky materials and solvents.
- Manual operation
 - Without power supply, the damper can be operated manually and fixed in any required position.

Electrical connection of the actuator in protection box

Protection box without slot or predrilled holes

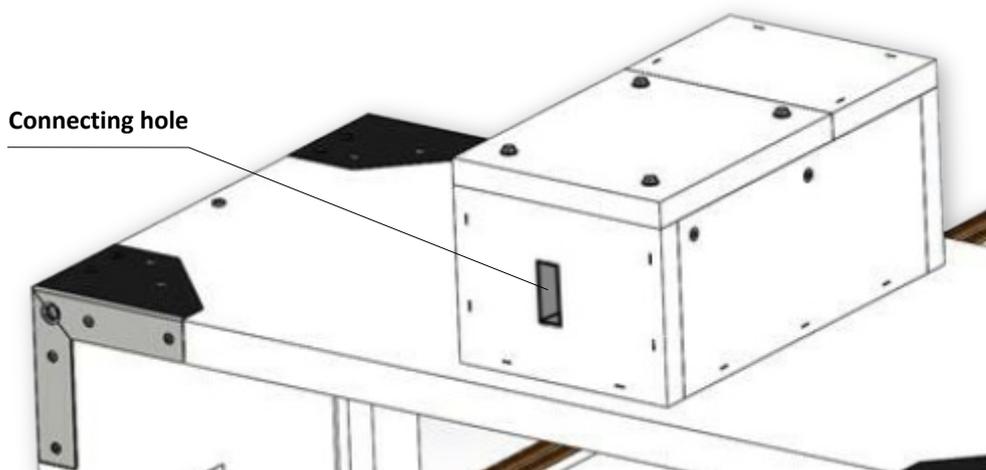

- Drill two holes into the protection box (from outside to inside) and pull through field wiring cables (CAT 3 fire resistant cables as BS 8519) to connect to the actuator trailing lead inside the housing, using a standard screwed cable connector block, the protection box is made of calcium silicate plates.
- Procedure
 - Use drill (drill size acc. To suit connecting cable $\varnothing + 2$ mm for seal up by mastic) and make two holes. It is possible to drill holes in any side of the housing.
 - Pull the heat resistant cable through the calcium silicate plate (wall) and connect with cables from actuator acc. to above mentioned electrical diagram.
 - Seal up the space around cable with fire resistant mastic (HILTI CFS-S ACR, PROMASTOP) or equivalent.
 - Let the mastic harden.

Example of position of holes in the wall of the box, without pre-manufactured slot

Protection box with slot including intumescent tapes – not available for UK

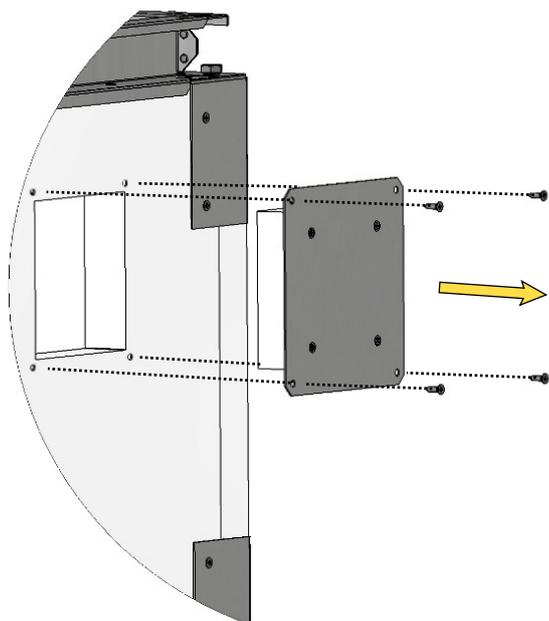

- To connect the actuator, use the prepared hole in the box, which is equipped with intumescent tape.
- If necessary, the hole can be additionally filled with fire-resistant sealant.

Example of pre-manufactured slot in the insulating box, with intumescent tape inside slot

Entry into service and revisions

- Before entering the dampers into operation after assembly and after sequential revisions, checks and functionality tests of all designs including operation of the electrical components must be successfully provided and finished. After entering into operation, these revisions must be done according to requirement set by national regulations.
- In case that dampers are found unable to serve for their function for any cause, it must be clearly marked. The operator is obliged to ensure that the damper is put into condition in which it is ready for function and meanwhile he is obliged to provide the fire protection by another appropriate way.
- Removing the inspection hole cover
 - Unscrew four of the edge screws to release the cover and then remove it from its original position.
- Results of regular checks, imperfections found and all-important facts connected with the damper function must be recorded in the "FIRE BOOK" and immediately reported to the operator.
- Before entering the dampers into operation after their assembly and by sequential checks, the following checks must be carried out for all designs.
- Visual inspection of proper damper integration, inside damper area, damper blade, contact surfaces and silicon sealing.

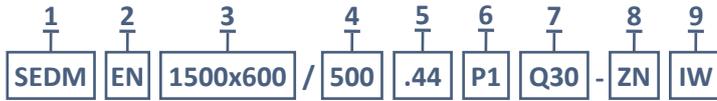

Inspection hole detail

- Ensure each damper is fully checked for operational capability, control should be initiated from the control system. Dampers blades should open and close correctly and operation should be visually inspected and documented prior to handover.

XI. ORDERING INFORMATION

Ordering key

EXAMPLE:

SEDM EN 1500x600/500 .44 P1 Q30-ZN IW

Smoke control damper SEDM, dimension 1500x600 mm, built length 500 mm, control design with spring return actuator AC 230 V, flange on the blade side, flange dimension 30 mm, galvanized material variant, impregnation against humidity.

1 | Type of smoke control damper - SEDM

2 | Country of destination

3 | Damper dimensions A x B → see pages 11 to 22

4 | Built length - 500 mm

„A“ is the width of the damper
„B“ is the height of the damper

5 | Damper design

.44	With actuating mechanism BEN, BEE, BE, InMax 50.75-S for 230V
.54	With actuating mechanism BEN, BEE, BE, InMax 50.75-S for 24V
.65 *	With actuating mechanism BEN (BEE)-SR for 24V

* Design .65 is not available by using actuating mechanism BE, InMax 50.75-S

6 | Accessories

	Without flanges
P	With flanges on both sides
P1	Flange on the blade side
P2	Flange on the actuating mechanism side

7 | Flange dimension

Q30	Flange width 30 mm
-----	--------------------

8 | Material

ZN	Galvanized
----	------------

9 | Surface treatment

	Without surface treatment
IW	Damper blade impregnation, impregnating agent PROMAT 2000 - impregnation against humidity
IA	Damper blade impregnation, impregnating agent PROMAT SR - impregnation against chemical

Accessories

Flange

1| Accessory type - flange

3| Type of smoke control damper - SEDM

4| Damper dimensions A x B → see pages 11 to 22

2| Flange design

P	With flanges on both sides
P1	Flange on the blade side
P2	Flange on the actuating mechanism side

Installation holder

1| Accessory type - installation holder

2| Installation holder design

L = 500	Length 500 mm
L = 250	Length 250 mm

Data label

- Data label is placed on the damper casing (example)
